

ACE736E

42V Input Standoff Voltage, 0.4A Step-Down Converter

Description

The ACE736E is a wide input range, high-efficiency, and high frequency DC-to-DC step-down switching regulator, capable of delivering up to 0.4A of output current. With a fixed switching frequency of 750KHz, this current mode PWM controlled converter allows the use of small external components, such as ceramic input and output caps, as well as small inductors. ACE736E also employs a proprietary control scheme that switches the device into a power save mode during light load, thereby extending the range of high efficiency operation. An OVP function protects the IC itself and its downstream system against input voltage surges. With this OVP function, the IC can stand off input voltage as high as 42V, making it an ideal solution for industrial applications such as smart meters as well as automotive applications.

In automotive systems, power comes from the battery, with its voltage typically between 9V and 24V. Including cold crank and double battery jump-starts, the minimum input voltage may be as low as 4V and the maximum up to 36V, with even higher transient voltages. With these high input voltages, linear regulators cannot be used for high supply currents without overheating the regulator. Instead, high efficiency switching regulators such as ACE736E must be used to minimize thermal dissipation.

Features

- Wide Input Operating Range from 4V to 38V
- Standoff Input Voltage: 42V
- High Efficiency at 20V In 12V Out: Up to 95%
- High Efficiency PFM mode at light load
- Capable of Delivering 0.4A
- No External Compensation Needed
- Current Mode control
- Logic Control Shutdown
- Thermal shutdown and UVLO
- Available in SOT23-6 Package

Application

- Smart Meters
- Industrial Applications
- Automotive Applications

ACE736E

42V Input Standoff Voltage, 0.4A Step-Down Converter

Absolute Maximum Rating

| Parameter | Value | |
|-----------------------------|--------------------|----------|
| IN Voltage | -0.3V to 42V | |
| SW ,EN Voltage | -0.3V to VIN+0.3 | |
| BST Voltage | -0.3V to SW+6V | |
| FB Voltage | -0.3V to 6V | |
| SW to ground current | Internally limited | |
| Operating Temperature Range | -40°C to 85°C | |
| Storage Temperature Range | -55°C to 150°C | |
| Thermal Resistance | θ_{JA} | 220 °C/W |
| | θ_{JC} | 110 °C/W |

(Note: Exceeding these limits may damage the device. Exposure to absolute maximum rating conditions for long periods may affect device reliability.)

Packaging Type

| SOT-23-6 | Description | Function |
|----------|-------------|---|
| 1 | BST | Bootstrap pin. Connect a 10nF capacitor from this pin to SW. |
| 2 | GND | Ground |
| 3 | FB | Feedback Input. Connect an external resistor divider from the output to FB and GND to set V_{OUT} |
| 4 | EN | Enable pin for the IC. Drive this pin high to enable the part, low to disable. |
| 5 | IN | Supply Voltage. Bypass with a 10 μ F ceramic capacitor to GND. |
| 6 | SW | Inductor Connection. Connect an inductor between SW and the regulator output. |

Electrical Characteristics

$V_{IN}=V_{EN}=5$, $T_A=25^{\circ}\text{C}$

| Parameter | Conditions | Min | Typ | Max | Unit |
|--------------------------------|--|------|------|------|--------------------|
| Input Standoff Voltage | | 42 | | | V |
| Input Voltage Range | | 4 | | 38 | V |
| Input UVLO | Rising, Hysteresis=140mV | | 3.80 | | V |
| Input OVP | Rising, Hysteresis=1.3V | | 38 | | V |
| Input Supply Current | $V_{FB}=0.85\text{V}$ | | 0.6 | | mA |
| Input Shutdown Current | | | 6 | | μA |
| FB Feedback Voltage | | 0.78 | 0.80 | 0.82 | V |
| FB Input Current | | | 0.01 | | μA |
| Switching Frequency | | | 75 | | KHz |
| Maximum Duty Cycle | | 90 | | | % |
| Fold-Back Frequency | $V_{FB}=0\text{ V}$ | | 95 | | KHz |
| High side Switch On Resistance | $I_{SW}=200\text{mA}$ | | 550 | | m Ω |
| High side Switch Current Limit | | | 0.7 | | A |
| SW Leakage Current | $V_{IN}=12\text{V}, V_{SW}=0, EN=\text{GND}$ | | | 10 | μA |
| EN Input Current | $V_{IN}=12\text{V}, V_{EN}=5\text{V}$ | | 1 | 5 | μA |
| EN Input Low Voltage | Rising, Hysteresis=100mV | 0.8 | 1.1 | 1.4 | V |
| Thermal Shutdown | Hysteresis=40 $^{\circ}\text{C}$ | | 150 | | $^{\circ}\text{C}$ |

Functional Descriptions

Loop Operation

The ACE736E is a wide input range, high-efficiency, DC-to-DC step-down switching regulator, capable of delivering up to 0.4A of output current, integrated with a 550m Ω high side MOSFET. It uses a PWM current-mode control scheme. An error amplifier integrates error between the FB signal and the internal reference voltage. The output of the integrator is then compared to the sum of a current-sense signal and the slope compensation ramp. This operation generates a PWM signal that modulates the duty cycle of the power MOSFETs to achieve regulation for output voltage.

Light Load Operation

Traditionally, a fixed constant frequency PWM DC-DC regulator always switches even when the output load is small. When energy is shuffling back and forth through the power MOSFETs, power is lost due to the finite RDSOns of the MOSFETs and parasitic capacitances. At light load, this loss is prominent and efficiency is therefore very low. ACE735E employs a proprietary control scheme that improves efficiency in this situation by enabling the device into a power save mode during light load, thereby extending the range of high efficiency operation.

Notes

ACE does not assume any responsibility for use as critical components in life support devices or systems without the express written approval of the president and general counsel of ACE Electronics Co., LTD. As sued herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
